EDUCATION

JAMIA MILLIA

BACHELOR OF ARTS

Jul 2020 | Delhi, IN

COURSEWORK

UDEMY

WEB DEVELOPER BOOTCAMP

DOM Manipulation
Async JavaScript
Array Methods
AJAX and API's
Introduction to React
JSX in Detail
Local React Apps With Vite
Working With Props
React Events
React Hooks
Component Design
React Forms
Material UI

FREECODECAMP

DATA STRUCTURES AND ALGORITHMS

Advanced Array Methods
Recursion
Regex
Sorting
Functional Programming

SKILLS

PROGRAMMING

ReactJS • NextJS
Redux • Tailwind CSS
Material UI • Framer Motion
RestAPI • GraphQL • Websockets
Familiar:
Bootstrap • AWS • Firebase • MySQL

EXPERIENCE

FANTOZ TECHNOLOGIES | FRONTEND DEVELOPER

Jul 2023 - Present | New Delhi, IN

Collaborated with international clients to develop dynamic and scalable applications, ensuring optimal performance and user experience. Utilized modern web technologies and frameworks to deliver efficient and robust code solutions.

PROJECTS

ASSISTMD | AI ASSISTANT FOR DOCTORS

I designed and developed a responsive UI using **React.js** and **Tailwind CSS**, implementing efficient state management with **Redux**. By integrating **WebSockets (Socket.io)**, I enabled real-time transcription of recorded audio through **React Mic**. Additionally, I leveraged **Supabase BaaS** for scalable database storage and seamless user authentication. This project not only demonstrated my ability to work with cutting-edge technologies but also improved the application's performance and user experience.

APT-STATUS | APARTMENT LISTING APP FOR BUILDERS

- **Developed a Full-Stack App:** Created a dynamic application for builders to list buildings and manage apartment occupancy statuses.
- **Front-End Development:** Utilized React and Material UI for the user interface, employing advanced array methods to efficiently handle complex data structures.
- **Back-End and Deployment:** Leveraged Firebase for data storage and user authentication. Managed deployment and data handling on the backend.
- **User Authentication and Roles:** Implemented dual logins for Builders and Tenants, providing tailored interfaces and functionalities.
- **Builder Dashboard:** Enabled builders to list buildings, update apartment details, and manage occupancy statuses via a comprehensive dashboard.
- **Tenant Interface:** Facilitated tenants' ability to browse available apartments and contact builders directly.
